STUDENT GUIDE

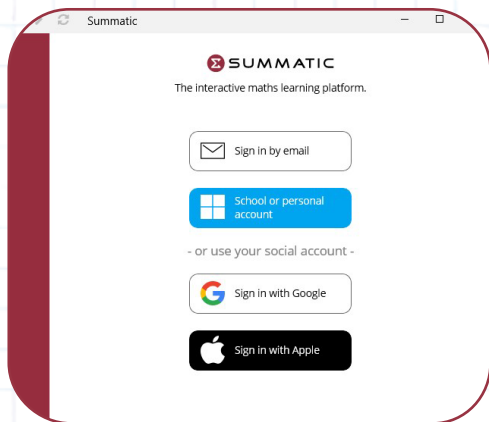

STUDENT GUIDE

Download the app by scanning this QR code

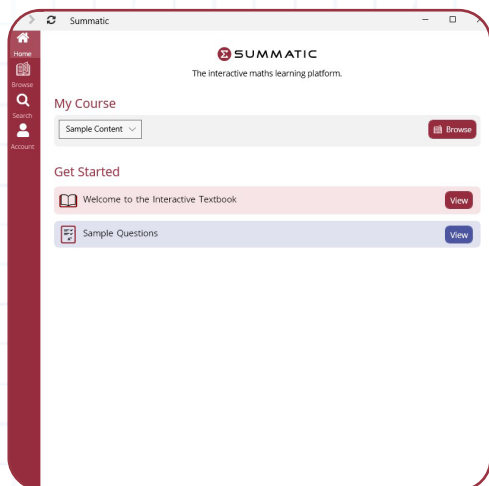

LOGGING IN

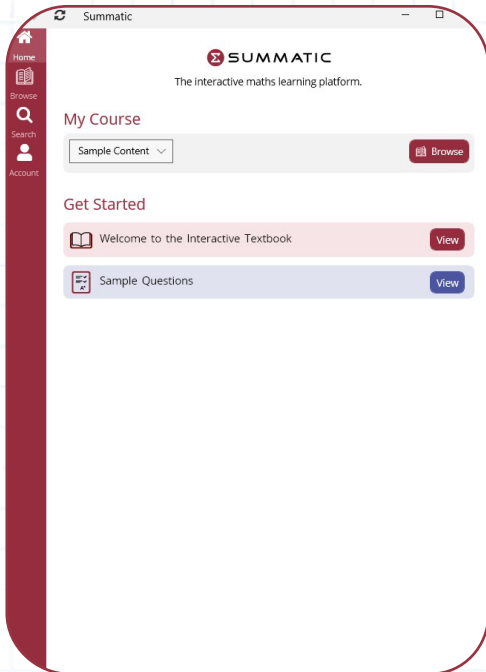

The first step to using the Summative application is to log in and create an account. This is done by either using an email sent to you by your institution or using one of the 4 methods presented to you on the login screen. Follow the simple steps when selecting your login method and you should have no problems.

NAVIGATION

Now that you've logged in you need to familiarize yourself with the navigation bar. This bar is what you use to access all the content within the app. In this guide, you will be learning about the **Home**  section the **Browse**  section the **Search**  section, and the **Account**  section. By selecting the respective icon you can access the respective page.

HOME

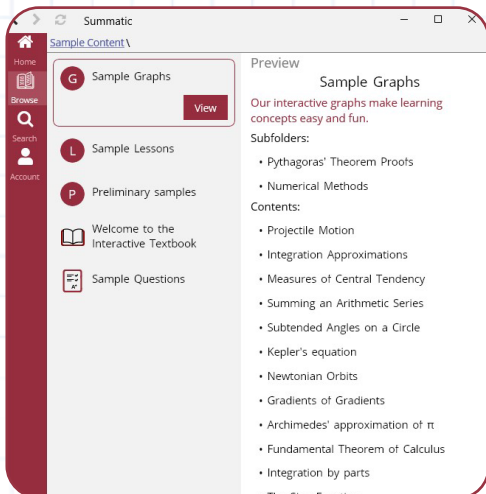

This page gives you immediate access to your assessments and to choose what course you would like to view via the browse section.

My Course

Using the **“My Course”** section you can select the coursebook you would like to view. This is done by using the filters below. Simply select the furthest to the left and set it to your universities course then hit the browse button on the far right. This will open the browse page with your selected content open.

BROWSE

This is the browse page where you can view textbooks and your course content. Simply start by selecting which area you would like to view and hit the **View** button next to what you have selected. Repeat this until you select an item with a **book**  icon and you will have reached your first lesson. You can repeat the same method to navigate to any course content you require.

SEARCH

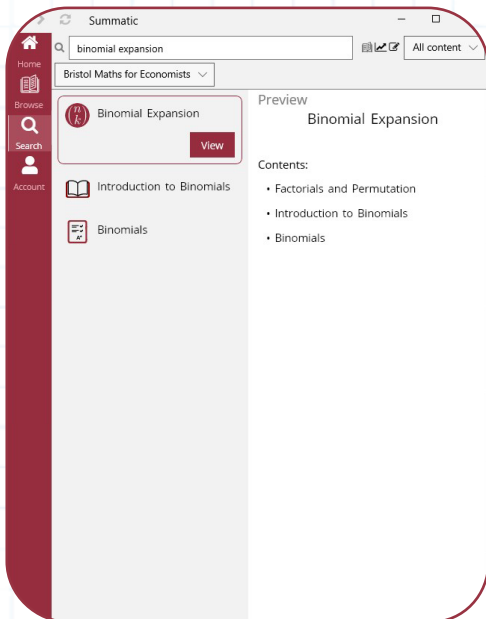

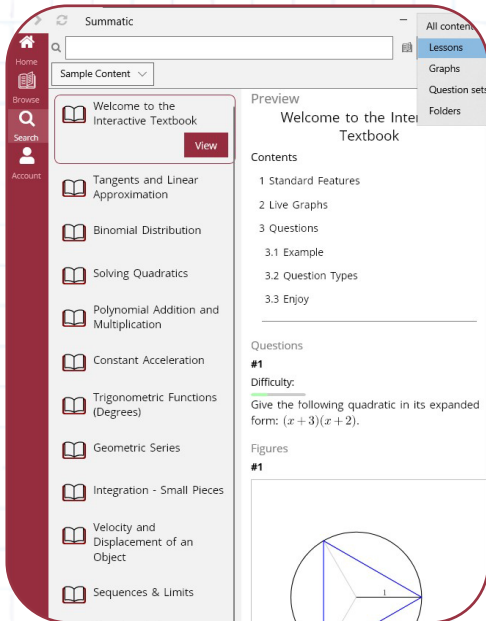

This page provides you with another method for finding course content as well as finding practice questions.

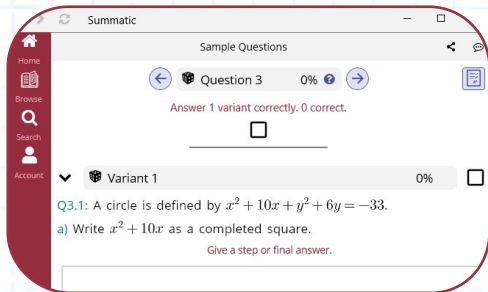

First type in the name of the content you are looking for at the top of the screen. For example “**Binomial expansion**” select the first dropdown filter and select the type of content you are searching for.

The types of content are “**Lessons**”, “**Graphs**”, “**Question sets**” and “**Folders**” you can explore each of these to learn more, but to start you off if you select question sets now you will be presented with question sets about what type of work you searched for. If you are following our example it will be questions on binomial expansion. Next, select your course from the next dropdown filter and you'll find questions relating to your course.

Question sets

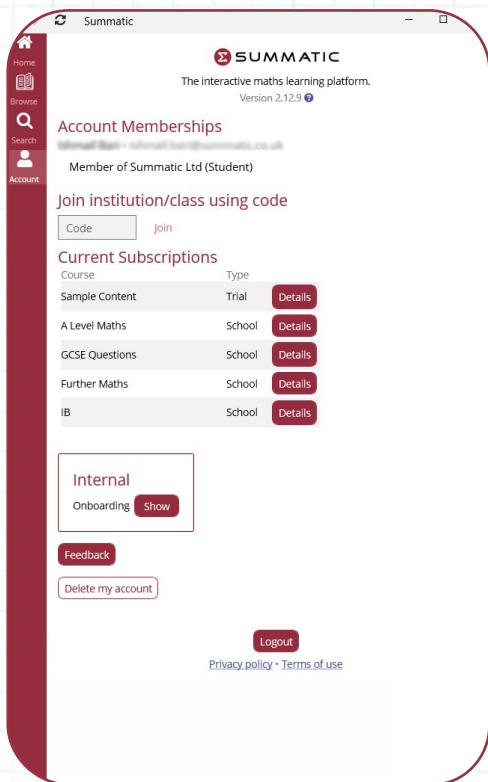

Variant questions are a form of question type that changes each time it is attempted.

These are used to repeatedly practice your mathematical skills with repeatable questions. You know a question is a Variant question when you see  (dice icon) before the question number.

ACCOUNT

The account page is where you can make alterations to your account and most importantly join your institution via a code they may have provided. Here you can also view the subscriptions you have access to as well as reset your question attempts, provide feedback and delete your account.

Institution Code

An institution code may have been provided to you by a staff member. This can be used in the **“Join institution/class using code”** section. Simply type your code within the box below and hit join. This will add you to the institution.
